### Professional Summary

Senior QA Engineer with five years of experience in fintech, specializing in backend and API testing. Experienced in microservice integrations, data integrity, distributed systems, and production issue analysis

### Skills

- REST API & microservices testing, HTTP/JSON, contract validation
- SQL/PostgreSQL data validation, migrations, integrity checks
- Integration & end-to-end testing in distributed systems
- Log analysis (Kibana), metrics & incident investigation
- Kafka event validation and flow control
- Smoke, regression, release verification
- Test design, requirement analysis, defect lifecycle
- Cross-team collaboration (Dev, BA, DevOps)

### Experience

Jun 2025 - Present

#### Performance Lab - Lead QA Engineer

- Tested REST APIs and microservices in a distributed environment
- Verified contracts, HTTP statuses, request/response structures
- Performed SQL checks and data consistency validation
- Analyzed logs and system behavior
- Validated event flows in Kafka / RabbitMQ
- Participated in requirements and API reviews

May 2024 - Jun 2025

#### Renaissance Credit Bank - Senior QA Engineer

- Performed end-to-end testing of complex banking processes
- Validated integrations between multiple microservices
- Tested REST APIs, verified data in PostgreSQL
- Investigated incidents using Kibana and Camunda
- Controlled Kafka events, delivery and ordering

- Prepared test documentation and regression coverage
- Worked closely with Dev, BA and DevOps in Agile setup

Apr 2022 - May 2024

**VTB Bank** - Senior QA Engineer

- Functional and non-functional testing of web & mobile
- UI validation, accessibility, feature toggles
- Smoke and regression across PREPROD / PROD-like environments
- Defect investigation using logs and monitoring tools
- Supported releases and configuration changes
- Collaborated with cross-functional teams

Nov 2021 - Apr 2022

**BSC Digital** - QA Engineer

- Performed system testing of iOS and Android applications
- Validated UI across devices and unstable network conditions
- Analyzed requirements and clarified business logic with BA
- Maintained and prioritized test cases in fast release cycles
- Managed defects and coordinated with Dev and analysts
- Investigated production issues and reproduced problems
- Executed smoke and regression for business-critical flows

**Education**

2020 - 2021

**Yandex Practicum** - Quality Assurance Engineer (Professional Training Program)
